- Companions
- Achievements

12. Floating Panels & HUD

- Combat HUD
- Quick Roll Panel
- Priority HUD
- Session Notes Panel

- General Panel
- Allies & Companions Panel

13. FAQ

Chapter 1: Getting Started

Chronicle is a comprehensive D&D; 5th Edition digital character sheet that runs entirely in your browser. No account is required and all your data is stored locally. This guide walks you through every feature, panel, and hidden shortcut so you can get the most out of your sessions.

1.1 First Steps

Open the application in any modern web browser. The first time you load it, you are greeted by a blank character sheet ready to fill. Everything you enter is saved automatically after a short delay, so you rarely need to press the Save button manually.

- Click the portrait area on the left side of the Character tab to upload a character image.
- Fill in your character's Name, Race, Class, Level, and Background in the Identity panel.
- Enter your six Ability Scores. Modifiers are calculated and displayed automatically.
- Navigate between sections using the sidebar on the left.

Tip: Set your character level first. Many derived values (proficiency bonus, spell save DC, ASI notifications) depend on it.

1.2 Navigation

The sidebar lists all available tabs. Click any tab button to switch. The sidebar can be collapsed by clicking the arrow toggle at the top, giving you more horizontal space on smaller screens.

- **Character** - Identity, ability scores, portrait, personality.
- **Combat & Skills** - HP, AC, saves, skills, concentration.
- **Equipment** - Weapons, armor, inventory, currency.
- **Spellbook** - Spell slots, cantrips, leveled spells, multiclass slots.
- **Features & Abilities** - Class features, feats, racial traits.
- **Wild Shape** - Druid beast form tracker.
- **Notes & Journal** - NPCs, quests, journal, lore, bestiary.
- **Time & Calendar** - In-game clock and campaign calendar.
- **Spell List** - Full searchable reference of D&D; spells.
- **Item Compendium** - Searchable database of items and equipment.
- **Bestiary** - Your personal in-character monster journal.
- **Companions** - Familiars, mounts, pets, summons.
- **Achievements** - Unlock and track D&D; achievements.

Note: Floating panels (Combat HUD, Quick Roll, Priority HUD, Session Notes, General, Allies & Companions) are accessed via the FAB menu button that floats in the bottom-right corner of the screen.

1.3 Saving & Data Management

Chronicle uses automatic saving (autosave) that triggers a few seconds after any change. You can also manually save, export, or import data from the header bar.

- **Save button** - Forces an immediate save to local browser storage.
- **Export button** - Downloads your entire character sheet as a JSON file. Use this to back up your character or transfer it to another device.
- **Import button** - Loads a previously exported JSON file, replacing current data.
- **Reset button** - Wipes all data and returns the sheet to its default empty state. A confirmation prompt prevents accidental resets.

Important: Clearing your browser storage will erase your character. Export regularly to keep safe backups.

1.4 Themes & Appearance

Click the palette icon or the gear icon in the header to open the Appearance panel. Themes are grouped into three categories:

- **Static Themes** - Classic visual styles with no animation. Options include Default, Arcane, Nature, Shadow, Fire, Ice, Sakura, Shadow Runes, Blood Moon, Void, Glacier, Ancient Gold, Underdark, Royal Paladin, and Eva-01.
- **Animated Themes (marked with a star)** - Themes with live particle or canvas animations. Includes Smoke, Embers, Fairy, Sakura, Shadow Runes, Storm, Abyss, Blizzard, Crimson Rain, Aurora, Void, Gion Matsuri, and Toro Nagashi. Animated themes may use more CPU on older devices.
- **Seasonal Themes (marked with a star)** - Special themes that match real-world seasons and holidays: New Year, Kagami Biraki, Chinese New Year, Valentine, Easter, Spring, Beltane, Mermay, Midsummer, Feast Night, Summer, Autumn, Halloween, Winter Frost, and Christmas.

The **Auto-Seasonal** toggle (visible in the Seasonal tab) automatically switches to the appropriate seasonal theme based on the current real-world date. You can also click the palette icon in the header to cycle quickly through recently used themes.

Tip: Animated themes add atmosphere but can be turned off any time by switching to any Static theme.

Chapter 2: Character Tab

The Character tab is the foundation of your sheet. It holds your identity, physical description, ability scores, personality traits, and backstory.

2.1 Identity & Portrait

The top-left panel contains your character portrait and key identity fields. Click the portrait area to upload an image from your device. Once uploaded, you have additional options:

- **Drag to reposition** - Click and drag the portrait to adjust which part of the image is visible.
- **Fill / Contain toggle** - The small icon in the portrait corner switches between cropped (fill) and letterboxed (contain) display modes.
- **Upload / Remove hover buttons** - Hovering over the portrait reveals buttons to replace or remove the image.
- **Resize handle** - Drag the bottom-right corner handle to resize the portrait frame.

Below the portrait, a **Rank Badge** shows your current player rank based on achievements earned. The rank progresses from Commoner upward as you unlock more achievements. Up to three pinned achievements appear as showcase badges beneath the portrait.

2.2 Ability Scores & Modifiers

The six ability scores (Strength, Dexterity, Constitution, Intelligence, Wisdom, Charisma) are entered as numbers from 1 to 30. Modifiers are calculated and updated automatically using the formula: $\text{modifier} = \text{floor}((\text{score} - 10) / 2)$.

- Each score box has up/down spin buttons for quick single-step adjustments.
- The proficiency bonus is derived from character level and used automatically in saving throws, skills, attack rolls, and spell calculations.
- Scores can go up to 30 to support magical enhancement effects.

2.3 ASI Tracker (Ability Score Improvements)

The ASI Tracker automatically notifies you when your character reaches a level that grants an Ability Score Improvement (levels 4, 8, 12, 16, and 19). A banner appears in the ability scores area when an ASI is available.

- **Allocating points** - Click any ability score button once to assign +1 (shown in yellow). Click the same score again to upgrade to +2 (shown in green, which locks all other scores out). Clicking a third time deselects it.
- **Split improvement** - Click two different scores once each to allocate +1/+1 across two abilities.
- **Feat option** - Click the "Take Feat" button to mark the ASI as used without changing any scores, recording that you took a feat instead.
- **Auto-apply** - Once exactly 2 points are allocated, the ASI is applied automatically after a short delay.
- **History** - A collapsible history panel shows all past ASI decisions for reference.

Note: The ASI Tracker integrates with the character level field. Changing your level may reveal or hide pending ASI notifications.

2.4 Inspiration, Exhaustion & Conditions

A small panel beneath the portrait manages three key character states:

- **Inspiration** - Click the gem to toggle. When lit, the gem glows to indicate you currently hold inspiration.
- **Exhaustion** - Six numbered pips represent exhaustion levels 1 through 6. Click a pip to set your current level; click the same pip again to clear it. Each level accumulates penalties according to D&D; 5e rules.
- **Conditions** - A grid of condition buttons (Blinded, Charmed, Deafened, Frightened, Grappled, Incapacitated, Invisible, Paralyzed, Petrified, Poisoned, Prone, Restrained, Stunned, Unconscious, and Concentrating) lets you toggle any active condition. Active conditions highlight in the grid.

Tip: Conditions toggled here also sync with the Combat HUD, so you can manage them from either location.

2.5 Personality & Backstory

The right column of the Character tab contains your character's personality information and backstory. All fields support free text entry:

- **Personality Traits** - Short descriptions of how your character behaves.
- **Ideals** - The principles your character believes in.
- **Bonds** - Connections to people, places, or things.
- **Flaws** - Weaknesses, fears, or compulsions.
- **Appearance fields** - Height, Weight, Eyes, Skin, Hair, and Gender.
- **Backstory** - A free-text area for your character's history.
- **Allies & Organizations** - Groups your character is affiliated with.

Chapter 3: Combat & Skills Tab

3.1 Core Combat Statistics

The top panel of the Combat tab displays the most frequently referenced combat numbers:

- **Armor Class (AC)** - Enter your AC manually, or use the "**Auto-calc**" button to compute it automatically from armor and shields you have equipped in the Equipment tab. Auto-calc respects armor type (light, medium, heavy), shields, and DEX modifier limits.
- **Initiative** - Set your initiative bonus manually, or click "**Roll Init**" to roll d20 + DEX modifier. The result is displayed below the button.
- **Speed** - Movement speed in feet. Accepts text for complex speeds (e.g., "30 ft / 60 ft fly").

3.2 HP Management

Hit Points are tracked with three separate values: Current HP, Maximum HP, and Temporary HP. Damage is applied to Temporary HP first before reducing Current HP.

- Use the spin buttons or quick +1, +5, -1, -5 buttons for rapid adjustments.
- Temporary HP does not stack; entering a higher value replaces the current temporary HP.
- Current HP cannot exceed Maximum HP through healing.
- When Current HP reaches 0, the death saving throws section becomes active.

Tip: The Combat HUD floating panel provides a staged HP system where you queue up damage and healing before committing, which is useful for complex multi-hit rounds.

3.3 Hit Dice

Hit Dice are tracked with the die type (e.g., 1d8 for a Fighter) and the number used. The large number shows remaining hit dice.

- **Use button** - Spends one hit die, rolls the appropriate die + CON modifier, and heals that amount during a short rest.
- **+1 button** - Restores one hit die (used after a long rest to recover half your total, rounded up).
- The die type is editable directly in the text field for multiclass situations.

3.4 Death Saving Throws

Three success dots and three failure dots track death saving throw results. Click any dot to toggle it. When Current HP drops to 0, the death save section in the Combat HUD automatically becomes visible.

- Three successes = stabilized (0 HP, unconscious, no longer dying).
- Three failures = dead.
- A Natural 20 on a death save returns the character to 1 HP (record as one success).
- A Natural 1 counts as two failures.

3.5 Saving Throws

The Saving Throws panel lists all six ability saves with their current modifiers. Toggle proficiency by clicking the pip next to each save. Proficient saves add your proficiency bonus automatically.

3.6 Skills & Proficiencies

All 18 D&D; 5e skills are listed with their governing ability score and current modifier. Each skill has a pip to mark proficiency status:

- Empty pip = not proficient.
- Half-filled pip = half proficiency (some class features and the "Jack of All Trades" bard feature).
- Filled pip = proficient (adds proficiency bonus).
- Double-filled pip = expertise (adds double the proficiency bonus).

Tip: Click the skill name itself in the Quick Roll panel (floating FAB menu) to instantly roll that skill check with advantage/disadvantage options.

3.7 Passive Senses

Passive Perception, Passive Investigation, and Passive Insight are calculated automatically as 10 + the relevant skill modifier (including proficiency). A text area below them records darkvision range and other special senses.

3.8 Concentration Tracker

The Concentration panel tracks whether you are currently concentrating on a spell. Click the spell name field to type the name of the spell. Click the ON/OFF button to toggle concentration.

Note: When concentration is active, the "Concentrating" condition chip also lights up in the conditions grid. Damage taken while concentrating requires a Constitution saving throw (DC = 10 or half damage taken, whichever is higher).

3.9 Bardic Inspiration

Bards have a dedicated Bardic Inspiration tracker below the Saving Throws panel:

- Select the die size (d6, d8, d10, or d12) matching your bard level.
- Use the + and - buttons to set the maximum number of inspiration dice available.
- Click each pip to mark it as used.
- Click the "Roll" button to roll the inspiration die when a recipient uses it.

3.10 Damage Resistances

A table lists all 13 damage types. For each type you can mark a Resistance (R), Immunity (I), or Vulnerability (V) by clicking the corresponding cell. Multiple statuses can coexist per type.

Chapter 4: Equipment Tab

4.1 Weapons & Attacks

The Weapons table tracks all melee and ranged attacks. Each row contains Name, Attack Bonus, Damage/Type, Range, and Properties. Click "+ Add Weapon / Attack" to create a new entry.

- Attack Bonus accepts modifiers like "+5" or you can enter the full formula.
- Damage/Type can be entered as dice notation: e.g., "1d8+3 slashing".
- Rows can be edited in-place; click the delete icon to remove a weapon.

Quick Preset (Make Quick Preset) - When editing a weapon, a "Make Quick Preset" option is available. This saves the weapon as a preset accessible from the Quick Roll panel under the Weapon tab, allowing you to roll attack and damage directly from the floating HUD without switching tabs. This is especially useful for frequently used attacks.

Tip: Create Quick Presets for your most-used weapons (main hand, off-hand, cantrip attacks) so you never need to leave whatever tab you are on during combat.

4.2 Armor & Shields

The Equipped Armor list shows all currently worn armor and shields. Click "+ Add Armor / Shield" to add a piece. Each entry stores:

- Item name, armor type (Light, Medium, Heavy, Shield), AC value, and DEX modifier cap.
- An equipped/unequipped toggle. Only equipped items contribute to the Auto-calc AC function.

Note: You can have multiple armor entries to quickly swap between loadouts without re-entering data.

4.3 Attuned Items

Three attunement slots are shown below the armor list. Click the gem beside each slot to mark it as attuned (glowing). Enter the item name in the text field. The D&D; 5e rule allows a maximum of three attuned items simultaneously.

4.4 Inventory

The Inventory table stores general equipment and consumables. It has built-in search and category filtering:

Categories: All, Food, Potions, Ammo, Tools, Misc, and Quest. Use the filter buttons above the table to show only items of a specific type. The item count badge updates to reflect the current filter.

- **Item name, Quantity, Weight, Notes/Type, and Action column.**
- Use the Action column to equip items (sending them to the Weapons or Armor sections) or return equipped items back to inventory.
- The quantity field supports spin buttons for fast incrementing.

4.5 Encumbrance Tracker

Below the inventory table, the total weight of all items is calculated automatically and compared against your carry capacity (Strength score x 10 by default). A progress bar and status label show:

- Unencumbered (below encumbrance threshold).

- Encumbered (speed -10 ft).
- Heavily Encumbered (speed -20 ft, disadvantage on Strength/Dexterity/Constitution checks and saves).

4.6 Currency & Treasure

Five currency types are tracked: Copper Pieces (CP), Silver Pieces (SP), Electrum Pieces (EP), Gold Pieces (GP), and Platinum Pieces (PP). All denominations are converted and displayed as a total GP equivalent value at the bottom of the panel.

Tip: The currency panel is also accessible from the Quick Roll floating panel under the "Money" tab for fast mid-session adjustments.

4.7 Magic Items

A separate Magic Items panel allows you to record special magical equipment with extended notes, rarity, and description. This keeps magical gear distinct from mundane inventory for clarity.

4.8 Quest Inventory

The Quest Inventory panel is dedicated to quest-related items that should not be mixed with regular gear. This makes it easy to track story items, mission objectives, and key items separately.

4.9 Resource Trackers

At the bottom of the Equipment tab, custom Resource Trackers let you manage any finite resource that does not have a dedicated panel. Examples include Superiority Dice, Ki Points, Sorcery Points, Lay on Hands pool, Channel Divinity charges, and more.

- Click "+ Add Resource Tracker" to create a new one.
- Each tracker has a name, maximum value, and current value with pips.
- Resources reset automatically when you take a short or long rest if configured.

4.10 External Storage

The External Storage sub-tab (accessible via the sub-tab bar at the top of the Equipment tab alongside Equipment & Inventory) tracks items that belong to your character but are not currently carried. Think of it as your stash at the inn, your wagon, your home base, or a rented vault.

This section is important because items stored here do not count toward your carry weight or encumbrance, but are still recorded as yours.

- Click "+ Add Storage" to create a named storage location (e.g., "The Yawning Portal Room 7", "Party Wagon", "Wizard Tower Vault").
- Each storage location can hold an unlimited number of items with name, quantity, weight, and notes.
- A badge on the sub-tab button shows the total number of stored items at a glance.
- Items can be moved between External Storage and your active Inventory by using the action buttons on each item row.

Tip: Use External Storage for loot you cannot carry yet, heirlooms you are keeping safe, or spare equipment for different scenarios.

Chapter 5: Spellbook Tab

5.1 Spellcasting Setup

The top-left panel of the Spellbook tab configures your primary spellcasting information:

- **Spellcasting Class** - Free text field; name the class providing your spells (e.g., "Wizard", "Cleric").
- **Spellcasting Ability** - Select from Intelligence, Wisdom, or Charisma. This drives all derived values.
- **Spell Save DC** - Calculated automatically: $8 + \text{proficiency bonus} + \text{spellcasting ability modifier}$.
- **Spell Attack Bonus** - Calculated automatically: $\text{proficiency bonus} + \text{spellcasting ability modifier}$.
- **Spells Known / Prepared** - A number field you fill manually to track your preparation limit.
- **Ritual Casting / Special Notes** - Free text for class-specific rules or reminders.

5.2 Spell Slots

Each spell slot level (1st through 9th) has a row with a max slot input and a series of dots. Click a dot to expend or restore a slot. Each row shows the current remaining / maximum count.

- Click a filled (available) dot to expend it.
- Click an empty (expended) dot to restore it.
- The maximum number field accepts direct input for flexibility.
- **Pact Magic slots** (Warlock) are visually distinguished with a purple tint on the dots. Pact slots restore on a short rest, displayed separately from standard long-rest slots at the same level.

5.3 Character Level & Spell Slots (Multiclass)

The "Character Level & Spell Slots" panel (also called the Multiclass Tracker) is located in the Spellbook tab. It handles spell slot calculations for both single-class and multiclass characters:

For single-class characters: Add your class and level in this panel — spell slots will fill in automatically, just like with multiclass. You never need to set slots manually.

For multiclass characters: Open the panel and click "+ Add Class" to add each class. For each class enter:

- **Class name** - Start typing and select from the autocomplete dropdown.
- **Level** - The number of levels in that class.
- **Caster type** - Automatically filled for known classes (Full, Half, 1/3, Pact Magic, or Non-caster). For homebrew classes, a dropdown appears to set the type manually.

The tracker calculates your combined caster level from all classes and displays the correct spell slot table automatically. It also calculates Warlock Pact Magic slots separately and adds them on top of the combined slots. Changes sync to the Spell Slots panel instantly.

Note: Full casters (Bard, Cleric, Druid, Sorcerer, Wizard) contribute their full level. Half casters (Paladin, Ranger, Artificer) contribute half their level (rounded down). Third casters (Eldritch Knight Fighter, Arcane Trickster Rogue) contribute one third of their level (rounded down). Pact Magic (Warlock) is tracked separately.

Tip: The total character level shown in the tracker badge also updates the character level field on the Character tab automatically when you change class levels.

5.4 Cantrips

Cantrips are displayed in a two-column grid. They are not tied to spell slots. Click "+ Add Cantrip" to add one. Each cantrip card shows:

- Name, school of magic, and description.
- A dice roll button if the cantrip has an attack or damage roll.
- Scaling information based on character level (1st-4th: base, 5th-10th: +1 die, 11th-16th: +2 dice, 17th-20th: +3 dice).

5.5 Spells by Level

Leveled spells are grouped into collapsible sections for each spell level (1st through 9th). Each section header shows how many spells are stored at that level. Spell cards contain:

- Spell name, level, school, casting time, range, components, duration.
- Full description parsed from the database or entered manually.
- A prepared/unprepared toggle for prepared casters.
- A concentration icon if the spell requires concentration.
- A ritual icon if the spell can be cast as a ritual.

5.6 Upcasting (Casting at Higher Levels)

Many spells have enhanced effects when cast using a higher-level slot. Chronicle handles upcasting directly from the spell card:

- Click the **Roll / Cast** button on a spell card.
- A modal appears showing the base damage/effect and a slot selector.
- Select any slot level at or above the spell's base level to upcast.
- The "At Higher Levels" section of the description is parsed automatically, and the adjusted dice formula is shown for each slot level choice.
- The application pre-fills the upcast dice based on the standard "+1dX per slot level above Nth" formula where present in the description.

Tip: Even for spells with complex upcasting rules, the raw "At Higher Levels" text is shown in the modal so you can always reference the exact effect.

5.7 Adding Spells

Click "+ Add Cantrip" or "+ Add Spell (choose level)" to add a spell. Two methods are available:

- **From the Database** - Start typing the spell name in the search field. A dropdown of known spells appears. Selecting one auto-fills all fields (description, school, components, range, casting time, duration, upcast text).
- **Manual Entry** - Leave the search blank and fill in all fields yourself. Useful for homebrew or expanded spells not in the database.

Quick Preset for Spells - Similar to weapon presets, you can mark any spell as a Quick Preset. This makes it available in the Quick Roll panel under the Weapon tab (which also shows spell presets). From there you can roll spell attacks, track concentration, or cast without navigating to the Spellbook tab.

Chapter 6: Features & Abilities Tab

The Features tab stores all non-spell class abilities, racial powers, feats, and background features. This keeps them organized and quickly accessible without cluttering the main sheet.

6.1 Class Features & Traits

All class-granted abilities belong here. Click "+ Add Class Feature" to create an entry. Each feature card contains a Name and Description field. Features can be expanded (to show full description) or collapsed.

Tip: Enter your Second Wind, Action Surge, Rage, Sneak Attack, and similar class features here with their full text so you have the rules on hand during play.

6.2 Racial Traits

Racial abilities (Darkvision, Fey Ancestry, Relentless Endurance, Breath Weapon, etc.) are stored in the Racial Traits panel. Use the same add/expand/collapse pattern as class features.

6.3 Feats

Feats taken in place of ASIs are recorded in the Feats panel. Include the full feat description text so the rules are available without referencing an external book.

6.4 Background Features

Your character's background grants a special feature (e.g., City Secrets for the Urchin background, Shelter of the Faithful for the Acolyte). Enter the description here.

6.5 Active Abilities & Actions

The Active Abilities section holds abilities that require an action, bonus action, or reaction and are not tracked by any other panel. This is a good home for:

- Bonus action attacks, off-hand strikes.
- Reaction abilities (Shield spell trigger reminder, Uncanny Dodge, Riposte).
- Per-encounter or per-rest abilities that do not fit the Resource Tracker format.
- Class abilities with complex trigger conditions.

Chapter 7: Wild Shape Tab

Designed specifically for Druids, the Wild Shape tab manages beast form transformations without losing track of your character's original HP and stats.

7.1 Activating Wild Shape

The left panel shows your current state. When not transformed, it displays "Not transformed" and a prompt to select a form. The right panel holds your saved beast forms. Click any saved form to activate it.

- You can store multiple beast form entries (Brown Bear, Wolf, Giant Eagle, etc.) with full stat blocks.
- Each form stores: HP (max), AC, Speed, Size, all six ability scores, attacks, and special abilities.
- When you activate a form, the Active panel populates with that beast's stats and HP tracker.

7.2 Beast HP Tracker

The active form panel has a dedicated Beast HP tracker separate from your character HP. This is essential because Wild Shape HP is tracked independently and damage to the beast form does not carry over to character HP (unless excess damage exceeds beast HP, which you track manually).

- Quick adjustment buttons: -10, -5, -1, FULL, +1, +5, +10.
- A visual HP bar with color transitions (green to orange to red as HP drops).
- Spin buttons and direct number input for precise values.

7.3 Managing Forms

Click "+ Add Form" to create a new beast entry. A form card has fields for all the beast's statistics. The Revert button in the active panel returns your character to normal form, restoring focus to the original HP tracker.

Tip: Add common Wild Shape forms at character creation so you can transform instantly during play without looking up stat blocks.

Chapter 8: Notes & Journal Tab

The Notes tab provides seven distinct note-taking sections for organizing campaign information. All sections support pagination (10, 25, 50, or 100 items per page) for large collections.

8.1 Notes Sections Overview

- **NPCs** - Non-player characters your character has met.
- **Quests** - Active, completed, and failed quests.
- **Journal** - Chronological session logs and narrative diary entries.
- **Lore Notes** - World-building, history, myths, and campaign lore.
- **Player Notes** - Personal strategy notes and reminders.
- **Bestiary** - Notes on monsters and creatures encountered.
- **General Notes** - Free-text catchall section.

8.2 NPCs

Each NPC entry contains Name, Location/Faction, Relationship status, Description, and extended Notes. A search bar at the top filters entries. Click "+ Add NPC" to create one. NPC cards expand and collapse.

8.3 Quests

Quest entries have Name, Status (Active, Completed, Failed), Description, Objectives list, and Reward fields. Filter quests by status to see only active missions. Completed quests are crossed out but retained for reference.

8.4 Journal Entries

Journal entries have a Date field (calendar date or session number) and a free-text body. Entries are shown in reverse-chronological order by default. Useful for recapping previous sessions.

8.5 Lore Notes

Lore entries have a Title and a multi-line text body. Ideal for recording deities, factions, historical events, and geographical information the party has discovered.

8.6 Player Notes

Player Notes are private strategy reminders visible only to you: spell combos, encounter tactics, shopping lists, or anything else you want to remember between sessions.

8.7 Session Notes Panel (Floating)

The Session Notes panel is a dedicated floating panel accessed from the FAB menu. It is designed for rapid note-taking during an active session:

- Enter raw notes in the text area during play.

- The **Classify** button analyzes your notes and categorizes detected entities into NPCs, locations, quests, and items using intelligent text parsing with Slovak/multilingual lemmatization support.
- A preview shows the proposed categorization before saving.
- Click **Save All** to distribute the classified notes to their respective sections (NPCs, Journal, etc.) in a single step.
- Or click **Save to Journal** to save the raw text as a single journal entry.

Tip: Use the Session Notes panel as your scratch pad during a session, then classify and sort everything with one click at the end.

8.8 Maps

The Maps sub-tab is accessible from the Notes & Journal tab via the sub-tab bar at the top (alongside Notes & Journal and Archive). It provides a full visual canvas editor for creating and annotating campaign maps.

Map List: Each campaign map is stored as a named card. The list supports pagination (16 maps per page), multi-select, and bulk delete. Click any card to open the editor for that map. Click "+ New Map" to create one.

- **Canvas tools:** Select (move, resize, multi-select with rubber-band), Pen (freehand drawing), Line, Rectangle, Ellipse, Arrow, Text label, and Image upload.
- **Color and line width** - A color picker and thickness slider apply to all drawn shapes and lines.
- **Grid overlay** - Choose from no grid, square grid, or hex grid. The grid overlays the canvas and helps with tactical positioning.
- **Background** - Set a solid background color or upload an image (scanned map, downloaded battlemat) as the canvas background.
- **Zoom & Pan** - Mouse wheel zooms in and out. Hold Space and drag to pan. Full zoom and reset controls in the toolbar.
- **Undo** - Up to 30 undo steps per map. Keyboard shortcut Ctrl+Z.
- **Object locking** - Lock any placed object so it cannot be accidentally moved or resized.
- **Duplicate map** - Copy any existing map as a starting point for a variant or adjacent area.

Tip: Upload a downloaded dungeon map as the canvas background, then draw annotations on top — secret doors, room names, trap locations, NPC positions.

8.9 Archive

The Archive sub-tab is a media gallery for storing images, reference art, character portraits, item illustrations, and any other visual material related to the campaign.

- **Folders** - Create named folders with custom icons to organise your archive (e.g., "Party Portraits", "Enemy Art", "Locations", "Item Reference").
- **Items** - Each archive item can hold multiple images, a title, a description, tags, and an optional link to a saved quest.
- **Tags** - Comma-separated tags on each item allow keyword searching across the entire archive.
- **Grid / Detail view** - Toggle between a compact image grid and a detailed list view showing descriptions and linked data.
- **Image storage** - Images are compressed automatically (max 1400px, JPEG 82% quality) and stored in IndexedDB for performance. The JSON export includes all image data.
- **Linked Quests** - An item can be linked to one of your saved quests. The quest name appears as a badge on the archive card.

Chapter 9: Time & Calendar Tab

The Time & Calendar tab keeps track of the in-game passage of time using a fully customizable fantasy calendar system.

9.1 Clock & Time Management

An analog clock face and digital time display show the current in-game time. The time period (MORNING, AFTERNOON, EVENING, NIGHT) updates automatically based on the hour. Controls allow:

- Advancing time by minutes, hours, or days using spin buttons or the advance controls.
- Short and Long Rest buttons that advance time by the appropriate duration and trigger relevant regeneration.
- A time log that records significant events and time advances for reference.

9.2 Calendar Presets

Three built-in calendar systems are available, selectable from a dropdown:

- **Forgotten Realms** - 12 months of 30 days, 10-day weeks (Tendays). Includes months such as Hammer, Alturiak, Ches, Tarsakh, Mirtul, Kythorn, Flamerule, Elesias, Eleint, Marpenoth, Uktar, and Nightal.
- **Greyhawk** - Based on the classic Greyhawk campaign setting with its unique festival weeks and 28-day months.
- **Standard (Real World)** - Regular Gregorian calendar with 7-day weeks for campaigns set in a familiar framework.

The calendar grid shows a full month view with the current day highlighted. Click any day to jump to it. Navigate between months using the arrow controls.

9.3 Weather & Seasons

The current season and weather conditions are displayed alongside the date. Both can be set manually from dropdown selectors covering all four seasons and a range of weather states (Clear, Overcast, Rain, Storm, Snow, Fog, etc.).

9.4 Holidays & Special Days

Special days and holidays defined in the selected calendar system are marked on the calendar grid with a distinct indicator. Hovering over a marked day shows the holiday name and description.

Chapter 9: Crafting Tab

The Crafting tab (Camp Crafting Table) lets your character craft items during downtime, long rests, or camp stops. It includes a built-in database of D&D; 5e-compatible recipes and supports fully custom homebrew recipes.

9.1 Crafting Overview

Each recipe defines the required ingredients, the tool proficiency needed, a time cost in hours, an optional skill check DC, and the item produced. The Crafting tab checks your inventory for ingredients automatically and indicates whether you have everything needed.

- Recipes are sorted by rarity: Common, Uncommon, Rare, Very Rare, and Legendary.
- A search bar and category filter narrow the recipe list instantly.
- Each recipe card shows the full ingredient list, required tool, time, DC (if any), and the produced item with weight and value.
- A green "Can Craft" indicator lights up when all required ingredients are present in your inventory.

9.2 Recipe Categories

The built-in recipe database covers eleven categories:

- **Food** - Trail rations, antitoxin broth, goodberry porridge, feast preparation.
- **Potion** - Healing potions (all tiers), antitoxin, resistance potions, speed potions, invisibility potions.
- **Poison** - Basic poison, drow poison, malice, oil of taggit, serpent venom.
- **Alchemy** - Alchemist fire, acid vials, thunderstone, tanglefoot bag.
- **Explosive** - Smokepowder pouch, bomb, flash pellet.
- **Ammo** - Standard arrows, crossbow bolts, silvered ammunition, fire arrows.
- **Weapon** - Improvised weapons, silver-coated blade.
- **Armor** - Leather armor, shield reinforcement.
- **Tool** - Thieves tools, healers kit, torch.
- **Magic** - Spell components, runestone, ink of inscription.
- **Misc** - Rope, candles, chalk, writing supplies, custom entries.

9.3 Crafting a Recipe

Select a recipe from the list to open the detail panel on the right. The panel shows:

- Full description and flavor text.
- Ingredient list with required quantities. Items already in your inventory are highlighted in green; missing items show in red.
- Required tool proficiency and crafting time in hours.
- DC and skill if a check is required.
- The produced item with quantity, weight, and gold value.

Click **Craft** to execute the recipe. Chronicle deducts the required ingredients from your inventory and adds the produced item automatically. If a DC check is required, a roll prompt appears first.

Tip: Prepare crafting ingredients in advance before long rests. If you have Cooks Utensils or Herbalism Kit proficiency, keep the matching ingredients stocked in your inventory.

9.4 Custom Recipes

Click "+ Add Custom Recipe" to create a homebrew recipe. Fill in the name, category, rarity, description, ingredient list, tool, time, DC, and produced item. Custom recipes are saved with your character data and appear in the list alongside built-in recipes, marked with a custom badge.

9.5 Crafting Log

Every successful craft is recorded in the Crafting Log at the bottom of the tab. Each entry shows the date, item crafted, quantity, and ingredients consumed. The log is retained across sessions as part of your character data.

Chapter 11: Reference Tabs

10.1 Spell List Browser

The Spell List tab provides a fully searchable, filterable reference of D&D; 5e spells. You do not need to navigate to the Spellbook to look up a spell. Filters include:

- Spell name search (partial match supported).
- Filter by class (Wizard, Cleric, Druid, Bard, Paladin, Ranger, Sorcerer, Warlock, Artificer, Blood Hunter).
- Filter by school of magic (Abjuration, Conjunction, Divination, Enchantment, Evocation, Illusion, Necromancy, Transmutation).
- Filter by level (cantrip through 9th level).
- Filter by component type (Verbal, Somatic, Material).
- Toggle: Concentration only, Ritual only.

Click any spell to expand its full description. A button on each spell card allows adding it directly to the Spellbook with a single click.

10.2 Item Compendium

The Item Compendium is a searchable database of weapons, armor, adventuring gear, tools, vehicles, magical items, and trade goods. Filter by category or search by name. Clicking an item shows its full description and stats. A button lets you add it directly to your inventory.

10.3 Bestiary (Player Journal)

The Bestiary tab is your personal monster journal — a place where you, as a player, record creatures your character has encountered during the campaign. This is not a read-only database; it is your own in-character knowledge base.

- Add an entry for every monster your character has met, fought, or heard about.
- Record only what your character actually knows: weaknesses discovered, tactics observed, loot found, lore learned from NPCs.
- Each entry is fully editable — name, description, notes, and any details you want to track.
- Use it as a field guide your character carries: the more you play, the richer it gets.

Tip: Keep the Bestiary in-character. If your character has never seen a Beholder, the entry stays blank — even if you as a player know the stat block.

10.4 Companions Tab

The Companions tab manages all non-player entities connected to your character: familiars, mounts, pets, animal companions, summons, undead thralls, constructs, and other allies.

Each companion card contains:

- Name, Type, and Status (Active, Dismissed, Injured, Dead, Unknown). Status affects the companion's visual appearance and whether it appears in the Quick Roll panel.
- HP tracker with current/max and a color-coded HP bar.
- Full stat block: AC, Speed, Initiative, all six ability scores with auto-calculated modifiers.

- CR, Size.
- Free-text fields for Attacks, Abilities, Conditions, and Notes.

Tip: Only companions marked as Active appear in the Allies section of the Quick Roll floating panel, where you can adjust their HP mid-combat without switching tabs.

10.5 Achievements Tab

The Achievements tab lists over 100 unlockable challenges organized into categories:

- **Adventure** - Campaign milestones like defeating iconic monsters and completing full character arcs.
- **Combat** - Battle feats like maximum damage rolls, overkills, and concentration endurance.
- **Kills** - Feats tied to defeating specific types of enemies.
- **Survival** - Enduring extreme situations, near-death experiences, and harsh conditions.
- **Roleplay** - Character decisions, alignment shifts, and narrative moments.
- **Shenanigans** - Chaos, creative problem solving, and memorable nonsense.
- **Politics & Power** - Faction influence, leadership, and political maneuvering.
- **Exploration** - Travel, mounts, vehicles, and world discovery.
- **Dice Rolls** - Remarkable dice outcomes (double natural 1 with advantage, double nat 20 with disadvantage).
- **Healing** - Medical and recovery feats, stabilizing allies, surviving near death.
- **Economy** - Wealth milestones and merchant interactions.
- **Shopkeeping** - Commerce feats: persuasion, deception, theft, and intimidation in shops.
- **Loot & Items** - Item collection and trade milestones.
- **Race-Specific** - Achievements unique to each playable race.
- **Class-Specific** - Achievements unique to each class.
- **Multiclassing** - Achievements for multiclassing into specific classes.
- **Avengers** - Special team-based and party-wide challenges.
- **Trackers** - Milestone-based achievements that accumulate over time: kills, gold earned, spells cast, distances travelled. Each tracker has multiple tiers unlocking progressively stronger titles.
- **Hidden** - Secret achievements. Conditions are not revealed until unlocked.

Click the toggle on any achievement to mark it earned. Earned achievements increment the rank badge displayed under your portrait on the Character tab. You can pin up to 10 achievements to the Priority HUD and up to 3 to the portrait showcase.

Chapter 12: Floating Panels & HUD

Several floating panels sit on top of the main sheet interface and are accessible from any tab. They are opened via the Floating Action Button (FAB) in the bottom-right corner of the screen.

11.1 Combat HUD

The Combat HUD is the most important floating panel for active play. It consolidates all combat-critical information in one place:

- **HP Section** - Shows Current HP, Max HP, and Temp HP. Stage multiple hits or heals before applying: enter a value, click Damage or Heal to queue it (shown as a preview), then click Apply. Click Cancel to discard the staged change.
- **AC & Initiative** - Reads from the Combat tab and displays current values.
- **Spell Slots** - All levels with slots are shown as clickable dots. Expend or restore slots directly.
- **Hit Dice** - Remaining/total display. Use a hit die or restore one without leaving the HUD.
- **Death Saves** - Three success/failure dots. Automatically shown when HP reaches 0.
- **Consumables** - Add frequently used items (potions, scrolls, arrows) to the HUD. Each consumable shows a name and current count with + and - buttons. Consumables added from the Inventory tab are marked with a sync indicator. Removing a consumable from the HUD also removes it from inventory.
- **Conditions** - Toggle all D&D conditions (Blinded, Charmed, Deafened, Exhaustion, Frightened, Grappled, Incapacitated, Invisible, Paralyzed, Petrified, Poisoned, Prone, Restrained, Stunned, Unconscious, Concentrating). Hover any chip for a rule summary tooltip.
- **Active Effects Tracker** - Track temporary effects with countdown timers (concentration spells, inspirations, environmental effects).
- **Inspiration toggle** - Mirrors the inspiration gem on the Character tab.
- **Lock button** - Locks the HUD open so it does not close when you click outside it.

Tip: During combat, keep the Combat HUD open and locked. Everything you need for a round fits inside it.

11.2 Quick Roll Panel

The Quick Roll panel has three tabs:

Dice tab - Roll any die (d4, d6, d8, d10, d12, d20, d100) with Normal, Advantage, or Disadvantage. Results appear in the roll history log. A custom modifier field adds a bonus to the roll. Roll history is kept for the session.

Weapon / Spell Presets tab - Shows all weapons and spells that have been marked as Quick Presets. For each:

- Click the attack die to roll a d20 + attack bonus (with Normal/Advantage/Disadvantage buttons at the top).
- Click the damage die to roll damage.
- For spells, select a slot level (upcasting) before rolling.

Skills tab - A grid of all 18 skills and 6 saving throws, each showing the current modifier and proficiency status. Click any to instantly roll. Advantage/Disadvantage buttons at the top apply to all rolls from this tab.

11.3 Priority HUD

The Priority HUD is a floating reference panel with two tabs:

- **Quests tab** - Shows pinned quests (up to 5). Pin a quest by clicking the pin icon on its card in the Notes tab. Pinned quests appear here for quick reference. Each entry is collapsible.
- **Achievements tab** - Shows pinned achievements (up to 10). Pin an achievement from the Achievements tab. Useful for tracking objectives you are actively working toward.

Tip: Pin your current session's main quest and 2-3 achievement targets to the Priority HUD so you always have your goals visible.

11.4 Session Notes Panel

Already described in Chapter 8.7. Access it from the FAB menu. Lock it open during active sessions.

11.5 General Panel

The General panel is a multi-purpose floating utility panel with five tabs, covering the most common non-combat needs during a session:

- **Purse** - Quick access to all five coin types (CP, SP, EP, GP, PP). Each currency has staged +/- buttons — queue a change, preview it, then click Apply to confirm. A recent transactions log tracks the last changes. Total GP equivalent is always visible at the top.
- **Time** - A compact version of the Time & Calendar tab. Shows an analog clock, digital time, current date, season, and weather. Advance time by minutes, hours, or days. Long Rest advances time to the next dawn. A mini calendar grid lets you jump to any day. Season and weather can be cycled or randomly generated with a click.
- **Food** - Tracks food units and water gallons. Quick buttons consume a full day (3 food, 1 water), one meal (1 food), or one drink. A Sync button pulls food quantities directly from inventory items tagged as food. Supply notes field for foraging reminders.
- **Rest** - Tracks short rests taken today (up to 5 pips). Records the date of the last long rest. Short Rest and Long Rest buttons trigger the appropriate recovery. A notes field for sleep quality, interruptions, or dreams.
- **Pray** - A custom prayer and ritual tracker. Add any recurring ritual your character performs (morning prayers, deity offerings, arcane rituals). Each card can be checked off as completed.

Tip: Keep the General panel open during travel and downtime — the Time and Food tabs handle everything that happens between sessions.

11.6 Allies & Companions Panel

The Allies & Companions panel gives you instant HP tracking for all companions marked as Active, without leaving the current tab.

- Shows a card for each Active companion with name, type, current/max HP, and a colour-coded HP bar.
- HP adjustment buttons on each card: -25, -10, -5, -1, +1, +5, +10, +25, and FULL to restore completely.
- A skull button instantly sets the companion to 0 HP.
- A notes and attacks text area on each card for quick ability reminders.
- **Add Attack button** - Opens a modal to define a named attack with hit formula and damage formula. Defined attacks can be rolled directly from the panel without switching tabs.

Note: Only companions with Status set to Active appear here. Change their status in the Companions tab.

Tip: Define attacks for your familiar or animal companion here so you can roll them mid-combat without ever leaving the Combat HUD.

Chapter 13: Frequently Asked Questions

How do I back up my character?

Click the Export button in the header. This downloads a .json file containing all your data. Keep this file safe. To restore, click Import and select the same file.

My browser storage was cleared and I lost my character. Can I recover it?

Unfortunately, if you had not exported your data, the character cannot be recovered from browser storage. Export regularly to avoid this. Consider exporting after every session.

How do I set up spell slots for a multiclass character?

Go to the Spellbook tab and find the 'Character Level & Spell Slots' panel. Click to expand it, then click '+ Add Class' and add each class with its level. The combined spell slot table is calculated and applied to the Spell Slots panel automatically. For Warlock Pact Magic, add Warlock as a separate class and the pact slots appear in purple alongside your combined slots.

What is the difference between the Spell List tab and the Spellbook tab?

The Spell List tab is a read-only reference database for looking up any D&D; 5e spell. The Spellbook tab holds only the spells your character actually knows or has prepared. You can add a spell directly from the Spell List to your Spellbook using the button on each entry.

How do I upcast a spell?

Open your spell card in the Spellbook tab. Click the Roll or Cast button. A modal window appears with a slot level selector. Choose any level at or above the spell's base level. The adjusted dice formula is shown automatically based on the 'At Higher Levels' section of the spell description.

How do Quick Presets work for weapons and spells?

When editing a weapon in the Equipment tab or a spell in the Spellbook, look for the 'Make Quick Preset' option. Activating it saves that attack or spell to the Quick Roll floating panel. From then on, you can roll it from the Weapon/Spell Presets tab in the Quick Roll panel without navigating to Equipment or Spellbook.

How does the Auto-calc AC button work?

The Auto-calc button reads all equipped armor and shields from the Equipment tab. It applies the correct formula for each armor type: Light Armor uses DEX modifier, Medium Armor uses DEX up to +2, Heavy Armor ignores DEX, and Shields always add +2. The result is written into the AC field. Make sure armor is marked as 'equipped' in the armor list for it to count.

Can I track multiple Wild Shape uses per day?

Yes. The Wild Shape tab has a Wild Shape uses tracker at the top showing how many uses you have remaining based on your Druid level. Click the dots to expend uses, and use the Long Rest button to restore them.

How does the ASI Tracker work when I level up?

When you change your character level to 4, 8, 12, 16, or 19, a banner appears below the ability scores on the Character tab. Click the banner to open the ASI panel. Allocate your two points by clicking ability score buttons, or click Take Feat to record a feat choice instead. Once two points are allocated, the improvement is applied automatically.

Can I use Chronicle for non-D&D; 5e systems?

Chronicle is built specifically for D&D; 5th Edition rules. Many sections (spell slots, proficiency bonus, skills, death saves) are hardcoded to 5e conventions. It is not recommended for other systems without significant adaptation.

How do I pin a quest to the Priority HUD?

Go to the Notes & Journal tab, find the Quest section, and open a quest card. Click the pin icon on that card. The quest will appear in the Priority HUD's Quest tab. You can pin up to 5 quests.

What does the Seasonal Auto-Toggle do?

When enabled in the Seasonal theme category of the Appearance panel, the application automatically selects the seasonal theme that matches the current real-world calendar date. For example, it will apply the Halloween theme during late October.

Can two people share a character sheet?

Chronicle uses local browser storage, which is device-specific. There is no built-in cloud sync or multiplayer feature. To share with another person, export your character, send the JSON file, and have them import it. Changes made by each person must be merged manually.

How do I reset just one section without wiping everything?

There is no per-section reset. The Reset button in the header wipes the entire sheet. If you need to clear a section, delete items manually within that section.

The Companions tab is not showing in the Quick Roll panel?

Only companions with the Status set to 'Active' appear in the Quick Roll panel's Allies tab. Open the Companions tab, find the companion, and change their status to Active.
